000 mountains surround narrow ravines, where spring water trickles. The
137 country is almost entirely wooded; it is virgin forest in all its vigor, and the most varied species grow there side by side; the imposing silk-cotton tree, Eriodendron anfractuosum, the large-leaved chestnut tree, Sloanea massoni, the logwood tree, Haematoxylon campecheanum, the mahogany tree, Swietenia mahogany, the anatta-tree, Bixa orellana mingle with palms of all sorts, gigantic bamboos and a multitude of arborescent ferns. All these trees are interlaced with endless lianas, and in their midst, giant like, rise splendid gum-trees, Dacryodes hexandra, from whose trunks one can cut an entire canoe.
491 The district is crossed, at some distance from the coast, by a road which is well-defined but not practicable for carriages, which is part of the road which makes a complete circuit of the island. In the part which crosses the Carib territory, one /135/ finds a few paved sections,
132 which date from the French occupation. The climate is humid and it rains frequently, even during the dry season. The temperature varies between 25° and 32° C., but the ocean breeze moderates the heat at all times and in the mountains there is always a certain freshness.

144 This part of Dominica is today inhabited by about a hundred
161 Caribs of pure stock and about 400 mestizos, who have some black blood.

142 The Carib is of medium height, but has fine muscles and is strong; the women are noticeably smaller than the men. Their eyes are black, comparatively small and somewhat set back, the cheek-bones prominent, the teeth white and well-set, the hair black, straight,
[302] shiny, quite long, but generally cut amongst the men; the latter are usually beardless, although some have, nevertheless, a short moustache. The skin is quite light or tends to be somewhat brown, but it is no darker than that of Europeans who live in the open in regions
291 where the sun is very hot. Formerly the Caribs were completely
302 naked and it was their custom to completely stain their bodies red
[751] with roucou (1) diluted /136/ with carapat oil, which protected them against insect bites,

[824 386] 1. Roucou or rocou, from the word urucu used by the natives of Brazil, is the word for the grains of the roucou tree, from which they extract a red dye. The roucou tree, a shrub of 4 to 5 meters in height, is very common in the Antilles.
